REPORT

ON

CARBON STUDY

FOR

JYOTHY ENGINEERING COLLEGE, THRISSUR

1. Introduction

This carbon footprint report has been prepared in full accordance with the Greenhouse Gas Protocol (GHG), the most widely used international carbon calculation methodology, compatible with other GHG standards such as the ISO 14064, which also allows for direct integration with national and international greenhouse gas (GHG) registries.

The carbon footprint gives a general overview of the possible greenhouse gas emissions from the institution, converted into CO2 -equivalents and it is based on reported data from internal and external systems. The purposes of the carbon indicators are to measure the carbon intensity per unit of product, in addition to showing environmental transparency towards external stakeholders.

2. Methodology

The carbon footprint reporting approach undertaken in this study follows the guidelines and principles set out in the "Greenhouse Gas Protocol Corporate Accounting and Reporting Standard" (hereafter referred to as the GHG Protocol) developed by the Greenhouse Gas Protocol Initiative and international standard for the quantification and reporting of greenhouse gas emissions -ISO 14064. This is the most widely used and accepted methodology for conducting corporate carbon footprints.

This involves accounting for, and reporting on, the GHG emissions from all those activities for which the institution is directly responsible. The items quantified in this study are as classified under the ISO 14064 standards: This includes electricity, LPG consumption as well as emission associated with diesel consumption in the institute vehicle. Emissions from business activities are generally classified as scope 1, 2 or 3 areas classified under the ISO 14064 standards.

Scope 1: Direct emissions (mandatory reporting)

This level concerns all emissions from sources owned or controlled by the JEC. Scope 1 includes All direct emissions from the institution owned or controlled sources, such as institute vehicles, and heat generation (LPG). The study has made all efforts possible to use the best available emissions factors available at the time and has cited the source of all emission factors used.

There are three Tiers presented in the 2006 IPCC Guidelines for estimating emissions from fossil fuel combustion. The study has considered Tier 1 method. The Tier 1 method is fuel-based since emissions from all sources of combustion can be estimated on the basis of the quantities of fuel combusted (usually from national energy statistics) and average emission factors.

Dr. SUNNY JOSEPH KALAYATHANKAL M.Tech, MCALM 8c, M.Phil, B.Ed Ph.D (Computer Science), Ph.D (Maths) PRINCIPAL Jyothi Engineering College

A CENTRE OF EXCELLENCE IN SCIENCE & TECHNOLOGY BY THE CATHOLIC ARCHOROCESE OF TRICHUR JYOTHI HILLS, VETIKATURI P.O. CHERUTHURUTHY, THRISSUR, PIN-679531 PH: +91-4884-259000, 274423 FAX: 04884-274777

NBA accredited B.Tech Programmes in Computer Science & Engineering, Electronics & Communication Engineering, Electrical & Electronics Engineering and Mechanical Engineering valid for the academic years 2016-2022, NBA accredited B.Tech Programme in Civil Engineering valid for the academic years 2019-2022.

The quality of these emission factors differs between gases. For CO2, emission factors mainly depend upon the carbon content of the fuel. Combustion conditions are relatively unimportant. Therefore, CO2 emissions can be estimated fairly accurately based on the total amount of fuels combusted and the averaged carbon content of the fuels. Hence, for CO2 in general, a Tier 1 method based on fuel carbon and fuel amount used will often suffice and the same approach is used in the report for calculating the GHG emissions from the combustion of fuels.

The activity data for calculating the GHG emissions is the amount of fuel combusted. The direct measurement has been used as the preferred method for the data collection of fuel combusted to calculate the emissions so as to reasonably minimize the uncertainty. When there is no accessibility to the direct measurement, emissions have been calculated through the application of documented models or facility specific correlation or through the mass balance approach.

Scope 2: Indirect emissions (mandatory reporting)

This level concerns all emissions from purchased energy. This means the purchase of electricity from the KSEB (Kerala State Electricity Board) which is connected to the Indian Grid. The electricity CO2 emission factor is calculated from the India electricity production mix, which is the suitable emission factor used for the Indian Grid.

Scope 3: Other Indirect Emissions

All other indirect emissions as a consequence of the activities of the institute that occur from sources neither owned nor controlled by the institution (e.g. outsourced distribution). Emissions covered under Scopes 1 and 2 are mandatory for reporting, while Scope 3 emissions can be reported on a voluntary basis.

Apart from the emissions from the institution, the possibilities of carbon sequestration by the vast area of college campus by soil and rich vegetation, is also explored in this carbon study.

3. Data Requirements and Emission Factors

The various data required and respective emission factors used in this study are shown in Table 1.

Table 1 Data Requirements and Emission Factors

Sl. No.	D.	ATA	EMISSION FACTORS	
	Item	Unit of Data	Carbon equivalent	Unit
	Scope 1: Direct Emissions			
1	Diesel Usage in Labs	litres of diesel/year	2.79	kg per litre
2	LPG (Hostels+ Canteen+Labs)	litre or kg of LPG / year	1.5	kg per litre
3	Incinerator	kg per year	1	kg per kg

The emission factors are deduced from the various secondary sources, reports and research papers. The institution has a solar power plant of 63 KW, which augments the energy needs in a sustainable way. The energy savings in this regard is assessed from an Energy audit conducted by an audited agency.

4. Conclusion

The total carbon emissions in Scope 1, Scope 2 and Scope 3 are estimated to be 329327 kg CO₂, 431353 kg CO₂ and 257744 kg CO₂ for the period April 2019 – March 2020. The total emissions of 1018424 kg CO₂ is expected to be generated by the institution accounting to about 0.63 tonnes per student on a per capita basis calculation.

The college campus spreading over 14. 14 hectares of land diverse with rubber plantation, coconut plantation, trees and shrubs, potted plants and lawns is a potential source for carbon sequestration. The above ground biomass provided carbon are calculated with the help of carbon equivalency factors deduced from literature review. The below ground soil Carbon was estimated by Kerala Forest Research Institute by conducting carbon study on soil obtained from a set of sample test pits. The abundance of vegetation has elevated the chances of the institution to pose itself as a carbon neutral institution as the sequestered carbon is much more than the estimated carbon emission.

QUESTIONNAIRE FOR AICTE CLEAN AND SMART CAMPUS AWARD 2020

Sr.	Sub	Questionnaire
No.	Part	
1.	A	 Is the segregation & measurement of different types of solid waste generated on campus being done? a. YES. SEGREGATION & MEASUREMENT FOR EACH TYPE OF SOLID WASTE IS UNDERTAKEN. b. Partial. No segregation, but total solid waste generated is being measured. c. No. No segregation/ measurement undertaken. ✓
	В	If the answer to 1.A is YES/PARTIAL, kindly provide the data in the enclosed format attached.(Format is enclosed in the mail) (To be arrived at from recorded data of last year)
2.	A	Does the institute have a dedicated staff for waste collection or disposal?
2.		a. No b. YES ✓
	В	Does the institute segregate its solid waste at the source of the generation? a. No b. YES✓
-	C	What in-house disposal facilities are used by the institute to dispose off the solid waste:
		a. None
	15	b. Compostingunit
		c. BIOGASPLANT
		d. BIO METHYLATIONPLANT
		e. Organic wasteconverter
		f. Incinerators
		g. SANITARYLANDFILLS
		h. OTHERS – PLEASESPECIFY
	D	Does your institution recognize the services for cleanliness of the campus by
		Sweeping/Cleaning staff?
		(T
		b. YES ✓ True Copy Attested Dr. SUNNY JOSEPH KALAYATHANKAL

3.		In case an in-house solid waste disposal facility is not available, then select the external agencies used by the institute to dispose off the solid waste: a. MUNICIPALCORPORATION
	1	b. PRIVATECONTRACTOR
		c. OTHERS - PLEASESPECIFY
4.	A	Does the institute have any green club/sustainability cell?
		a. No
		b. YES ✓
	В	If the answer to 4. A is YES, then provide the details of date of establishment, list of activities done, no. of Students/Faculty involved. Also, provide the documents/Photographs wherever applicable. (Upload pdf of max size 1 mb)
5.		How does the campus waste/sewage/effluent disposal system function?
		a. NO SEPARATION OF DISCHARGE. THE DISPOSAL IS COMMON. ✓
		b. SYSTEM SEPARATES GREY AND BLACKWATER
6.		Does the institute recycle waste water?
		a. No ✓
		b. YES
7.		How does the institute use recycled water?
		a. DUAL PLUMBING -FLUSHING
		b. GARDENING/ARBORICULTURE
		c. VEHICLE WASHING (VEHICLES INCLUDE INSTITUTE CARS, BUSES AND SOON)
		d. OTHERS - PLEASESPECIFY
8.		What percentage of Wastewater recycling is being undertaken on the campus?
		a. NONE ✓
		b. UPTO25%
		c. 25% - 40%
		d. ABOVE40%
		e. MORE THAN 60%
9.	A	Does the institute use water-efficient appliances on the campus (e.g., using sensors/automated hand washing taps, high efficient toilet flush,etc)? a. No ✓ b. YES
	В	If yes, please mention the types of appliances and procedure used for water
		conservation which invariable used with Traditional and Indian Knowledge Systems
		aspects(IKS): Dr. SUNNY JOSEPH KALATATHANKAL

	performance of the institution in respect of administration, improvement in teaching an						
	learning process, improvement in monitoring attendance etc.						
47	How the Smartness is being leveraged physically by on campus society (Students,						
	Faculty, Administrators etc.)						
	Students Faculties, Managers use the tools regularly in their day to day engagement and we are constantly deriving advantages in all spheres of working of the institute						
48	Whether the institute use any tools like IOT /Big data analysis /AI for students						
	Equity/adaptive learning?						
	The digitally connected campuses enhance student learning and environmental						
	sustainability. IoT innovation in the campus starts from whiteboards and connected						
	school buses, moving toward smart lighting and security cameras—all of which provide real-time data and valuable insights to students, parents, faculty and						
	administration. The most common IoT devices used in the classroom include:						
	Interactive whiteboards, Student ID cards, automated attendance tracking system						
	etc. This implementation let faculty to focus more on the primary work that is,						
	teaching and to focus less on managing the workflow of the classroom. Campus automated software CampusBook used in our campus are used to track students who						
	skip their classes, send alerts help students to concentrate academic work						
	regularly. Students can use smartphones, PDA to access their homework assignments,						
-	and test performance through online portals. Videos can be uploaded in the cloud, online video Lecturing enables Students to attend classroom lectures remotely.						
	online video Lecturing enables Students to attend classroom fectures remotery.						
49	Does institute use any Emerging Technologies like Artificial Intelligence, IOT, Data						
	Analysis etc. for helping disabled students or Rural/Agriculture Sector to promote						
	Entrepreneurship/skilling/heath monitoring/Waste Management?						
	YES. We use emerging technologies for helping disabled people for their improvement. For example,						
12.0	Lyza, for women, is a sanitary napkin developed by students with the support of institute that						
	gives an alert about the time to change the pads through a mobile application Alyzanis specially						
	designed for paralyzed women, autistic and mentally retarded womens With the invent of the product women will be more safe and comfortable in using pads as comproduct contains pure						
-	cotton.						
	W. ALCONE ECT TOTE Chilede						

50	Does the institute have any smart system to monitor fire safety measures?				
	No				
51 .	Has Institute taken any step for ensuring cyber security related issues?				
	The campus is equipped with a Unified Threat Management appliance to secure the network against harmful intrusions. The appliance currently installed is Cyberoam 300ING. Considering the increasing threats and extensive usage of the Internet the IT Team here is currently studying various options available in the market to upgrade the same with the latest solutions.				
	Students are encouraged to learn ethical hacking and find loopholes in our own network and applications. OS updates are done for better security.				
	The campus automation management system, named CampusBook, is developed in-house to ensure that the data is safe and secure.				
	A central server running Active Directory Domain Service (AD DS) authenticates and authorizes all users and computers assigning and enforcing security policies for all computers and installing or updating software.				
	Manual backups are taken periodically to safeguard the centrally stored data. The team is also studying the opportunities for implementing the automated backup system. Staff & Students are advised and proper awareness is provided on best security measures to be followed when using a system.				
52	Whether the institute has been awarded any kind of special recognition? If yes, Provide details with photographs/ Document. Accreditation by National Board of Accreditation for 5 branches ieCivil, Mechanical, Electrical, computer science and electronics and communication Accreditation by National Assessment and Accreditation Council (NAAC), Atal Ranking of Institutions on Innovation Achievements				
53	Proof is attached Has the institute planted any type of Traditional Medicinal Herbal plants in the campus based on Indian Knowledge System (IKS)? If yes, Please provide the List and Photographs. Yes Details attached				
54	Provide the case study on Implementation of Traditional Indian Knowledge System (IKS) which includes food, water, Sanitation, Health, Management, Rain water harvesting etc. relevant to guidelines of Clean and Smart campus Award. Give details not more than 150 words (it may include pictorial representation/Videos/Photographs may also attached pdf of max size 1 MB) (Please note:-Separate award will be given to the deserving institute in this context) Rain water harvesting system

- c) Minimum Rate for Analysis = Rs 250
- d) Concessional rate for all staff and students @60% of prescribed cost subjected to a minimum of Rs 150
- e) For residents of Panjal and Vallathol nagar panchayath the rate is fixed at 75% of the total cost with minimum of Rs 200-copy of ration card / other proof to be produced
- fi All the payments in advance
- 2) Role of Office Bearers for Analysis of Water Samples and Answering of Web Site Questions
- a) Acceptance of water sample for testing after initial interaction /Fixing the parameters and fee / verification of remittance of fee in the office - Co-Ordinator / HOD Civil/Asst co-ordinator)
- b) Fee will be remitted in advance in the college office as per the guidelines at the time of sample acceptance
- c) Supervision of laboratory activities Co-Ordinator/ Asst co-ordinator
- d) Verification and interpretation of results and secondary interaction- Co-Ordinator / HOD civil
- e) Result to be prepared by the co-ordinator sent to the principle through the HOD civil
- f)Verification of all Activities and files , Remittance of fee ,Signing of Results etc Principal
- 3)Answering of Web Site Questions
 - a)Activities of Co-ordinator

All the questions will be reproduced in the concerned register and answers will be prepared in consultation with the consultants

b) Activity of HOD civil

- Approval of Role of Office Bearers for Analysis of Water Samples
- approval of Role of Office Bearers in Answering of Web Site Questions
- 4) Approval of Proposed Current Activities

2)

- 5) Approval of urgent requirements of the Centre
- 6) Approval and discussion on interaction table and format for entering result

Approval has been given as detailed below

1 a)Proposed rates for water testing are approved as under

Slno	Parameter	Rate for Analysis in	
	180, 100-197-11 367-11 91	Rupees	
1	Turbidity	20	
2	pH	20	
3	TDS	20	
4	Alkalinity	50	
5	Total Hardness	50	
6	Chloride	60	
7	Fluoride	60	
8	Nitrate	70	
9	Iron	60	
10	Manganese	60	
11	Suphate	40	
12	Sulphide	40	
13	DO	50	
14	COD	100	True Copy Attest
15	BOD	120	True Copy Allesi
16	Oil and grease	200	
17	Residual chlorine	15	
18	Suspended solids	40	
19	Coliform /100ml	250	
20	E_Coli /100ml	250	

Additional provisions as regards to water testing

Dr. SUNNY JOSEPH KALAYATHANKAL
b) The parameters to be tested is to be fixed after interaction with the winterproducing w
